Reference materials (RM):
material, sufficiently homogeneous and stable with respect to one or more specified properties, which has been established to be fit for its intended use in a measurement process

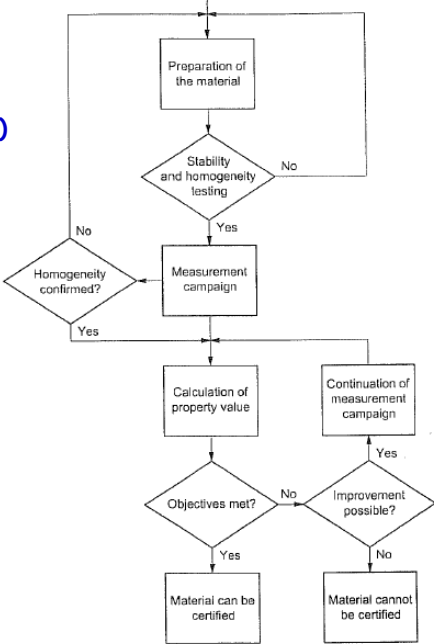

Certified reference materials (CRM):
reference material, characterised by metrologically valid procedures for one or more specified properties, accompanied by a certificate that provides the values of the specified properties, associated uncertainty, and a statement of metrologically traceability.

Proficiency testing (PT)

PT providers for nutrient analysis in Thailand

- Institute of Nutrition, Mahidol University (INMU) - first place
- Department of Science Service (DSS)
- National Food Institute (NFI)
- Department of Medical Sciences (DMSc)

During 1989 - 2013: **5 out of 10 PT rounds** were conducted on analyses of mandatory nutrients for nutrition labelling
(2 rounds at international level, 3 rounds at national level)

Kunchit Judprasong, et al.

Institute of Nutrition, Mahidol University (INMU), Thailand

6

Previous PT studies by INMU

Table 1. Summary of laboratory performance on mandatory nutrient analysis

Nutrient	Laboratory with good performance (%) <small> z-score ≤ 2</small>				
	PT-3	PT-4	PT-7	PT-9	PT-10
n	21	12	32	17	16
Lipid	33	85	58	76	69
Sat. Fat	-	40	45	73	80
Cholesterol	29	-	NE*	-	-
Protein	52	92	67	88	81
Dietary fibre	38	46	50	56	79
Sugars	27	46	40	40	NE*
Sodium	35	54	61	71	69
Vitamin A	57	67	NE*	-	-
Vitamin B1	71	36	56	73	57
Vitamin B2	67	80	74	NE*	NE*
Calcium	30	54	54	63	73
Iron	65	31	64	81	69
Moisture	59	67	82	82	88
Ash	68	69	70	29	75

Different test materials were used:

- PT-3 (1998) weaning food
- PT-4 (2000) instant noodle
- PT-7 (2003) milk powder
- PT-9 (2010) broad bean powder
- PT-10 (2011) cracker powder

Problematic nutrients:
- Nutrients: Sat. fat, cholesterol, dietary fibre, sugars, Vitamin A

- Amount of the nutrient in each matrix

of the nutrients

Kunchit Judprasong, et al.
Institute of Nutrition, Mahidol University (INMU), Thailand
7

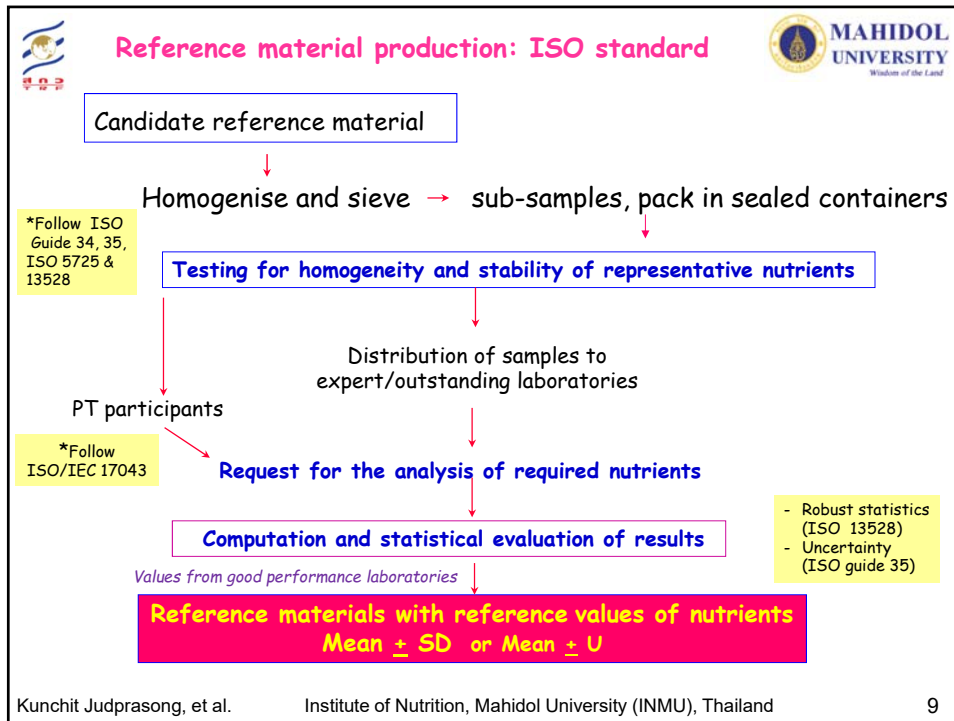

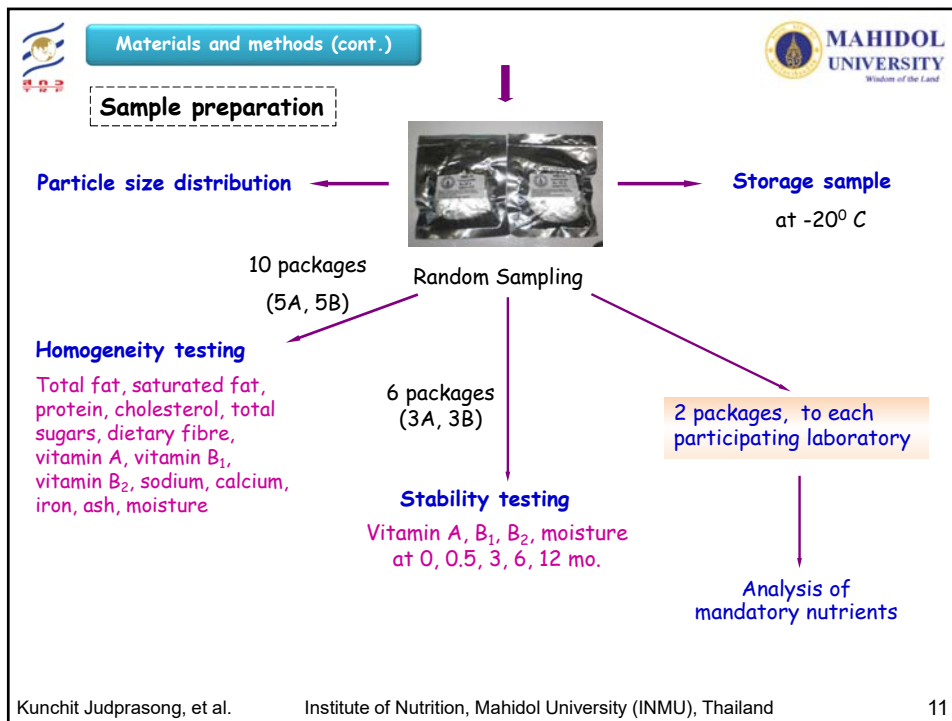

Objectives of this study

- To assess laboratory performance on analyses of mandatory nutrients for nutrition labeling using milk powder as the test material
- To develop food reference materials with reference/consensus values of mandatory nutrients for nutrition labelling to be used in quality control system in laboratories

Kunchit Judprasong, et al.
Institute of Nutrition, Mahidol University (INMU), Thailand

Homogeneity testing: statistical analysis

- 1). Checking for within sample variation (precision of the analyst): using Cochran's maximum range test → Pass
- 2). Checking for between sample variation (check homogeneity of the test materials) using
 - ISO 13528:2005 $s_s \leq 0.3\sigma_{pt}$
 - IUPAC (Thompson et al., 2006) $s_{sam}^2 < c, c = F_1\sigma_{all}^2 + F_2s_{an}^2$
 - %RSD, HORRAT approach $RSD_r/pRSD_R$

1) ISO 13528: 2005 Statistical methods for use in proficiency testing of interlaboratory comparisons.
2) Thompson M, Ellison SLR, Wood R. The International harmonised protocol for the proficiency testing of analytical chemistry laboratories (IUPAC Technical Report). Pure Appl Chem 78: 145-196, 2006.
3) ISO 5725-1994: Accuracy (trueness and precision) of measurement methods and results.

Kunchit Judprasong, et al. Institute of Nutrition, Mahidol University (INMU), Thailand 12

Table 2. Homogeneity testing: Between sample variation

Parameter (per sample)	Mean	Standard deviation (SD)	RSD _r (%CV)	Horwitz predicted Value (RSD _p)	HORRAT (RSD _r /RSD _p)	Acceptable HORRAT** (0.3-1.3)
Total fat (g)	18.38	0.22	1.2	2.6	0.46	pass
Saturated fat (g)	7.11	0.07	1.0	3.0	0.32	pass
Cholesterol (mg)	22	1	3.3	7.1	0.47	pass
Protein (g)	18.13	0.16	0.9	2.6	0.34	pass
Dietary fibre (g)	1.87	0.01	0.7	3.6	0.18	pass
Total sugar (g)	41.70	0.87	2.1	2.3	0.91	pass
Sodium; Na (mg)	248	13	5.3	4.9	1.08	pass
Vitamin A (µg)	795	61	7.7	11.7	0.65	pass
Vitamin B1 (mg)	0.79	0.03	3.4	11.7	0.29	pass
Vitamin B2 (mg)	0.87	0.02	2.3	11.5	0.20	pass
Calcium; Ca (mg)	650	18	2.8	4.3	0.65	pass
Iron; Fe (mg)	7.3	0.09	1.3	8.4	0.15	pass
Moisture (g)	2.15	0.06	2.7	3.6	0.74	pass
Ash (g)	4.35	0.02	0.4	3.2	0.12	pass

Kunchit Judprasong, et al. Institute of Nutrition, Mahidol University (INMU), Thailand 13

Stability testing: statistical analysis

1). ISO 13528 approach: $|\bar{x}_{\text{hom}} - \bar{y}_{\text{sta}}| < 0.3 \hat{\sigma}$

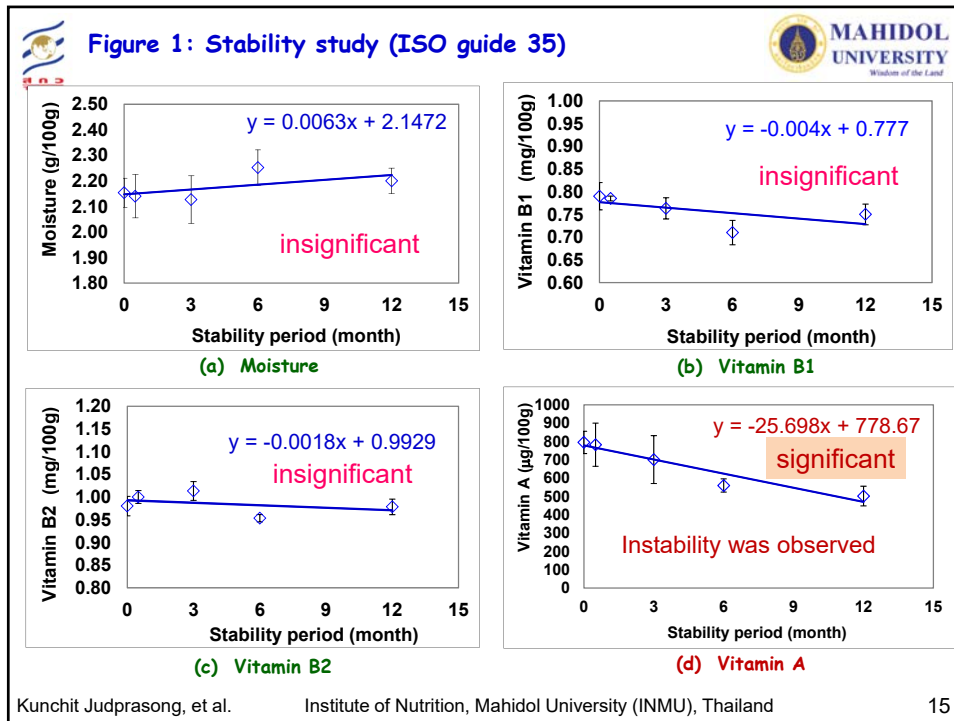

where X_{hom} = mean value from homogeneity of test material
 Y_{sta} = mean value from stability of each storage time
 $\hat{\sigma}$ = Horwitz's predicted standard deviation

2). ISO guide 35: $\frac{|b_1|}{s(b_1)} < t_{0.95, n-2}$ \Rightarrow \checkmark the slope is insignificant
 \checkmark no instability was observed

where b_1 = slope of stability data
 $s(b_1)$ = standard deviation of slope
 $t_{0.95}$ = critical t at 95% confidence limit for n-2 degree of freedom
 n = number of stability data

1) ISO 13528: 2005 Statistical methods for use in proficiency testing of interlaboratory comparisons.
 2) ISO guide 35: Reference materials - General and statistical principles for certification, Geneva, Switzerland 2006.

Kunchit Judprasong, et al. Institute of Nutrition, Mahidol University (INMU), Thailand 14

Establishing assigned values:

Consensus from participants in a round of PT scheme

(Algorithm A in Annex C of ISO 13528)

Assigned value: Robust mean (x^*) \pm robust SD (s^*),
 Robust mean (x^*) \pm uncertainty (u_x)

Standard uncertainty $u_x = \frac{1.25 \times s^*}{\sqrt{p}}$

s^* = the robust standard deviation of the results, calculated using Algorithm A in Annex C. p = number of participants' reported data

Kunchit Judprasong, et al. Institute of Nutrition, Mahidol University (INMU), Thailand 16

Table 3: **Assigned values of nutrients in milk powder estimated by ISO 13528**

Measurand	Unit per 100 g	Robust mean	Robust SD	%RSD _R	Standard uncertainty
Total fat	g	19.25	0.59	3.1	0.16
Saturated Fat	g	7.29	0.59	8.2	0.19
Cholesterol	mg	20.00	2.90	14.4	0.90
Protein (N x 6.38)	g	18.00	0.23	1.3	0.07
Dietary fibre	g	2.15	1.17	54.5*	0.39
Total sugar	g	42.89	2.42	5.6	0.69
Sodium	mg	223	26	11.6	8
Vitamin A*	µg	720	282	39.2*	88
Calcium	mg	809	76	9.4	23
Iron	mg	8.56	0.81	9.4	0.24
Vitamin B1	mg	0.66	0.11	15.9	0.04
Vitamin B2	mg	0.79	0.10	12.0	0.03
Moisture	g	2.37	0.20	8.2	0.05
Ash	g	4.50	0.06	1.2	0.02

* Not evaluate due to high variation

Kunchit Judprasong, et al. Institute of Nutrition, Mahidol University (INMU), Thailand 17

Laboratory performance by estimation of robust z-score: Between laboratory variation

$$\text{Robust z-score}_{\text{between}} = \frac{x_i - \bar{X}}{SD}$$

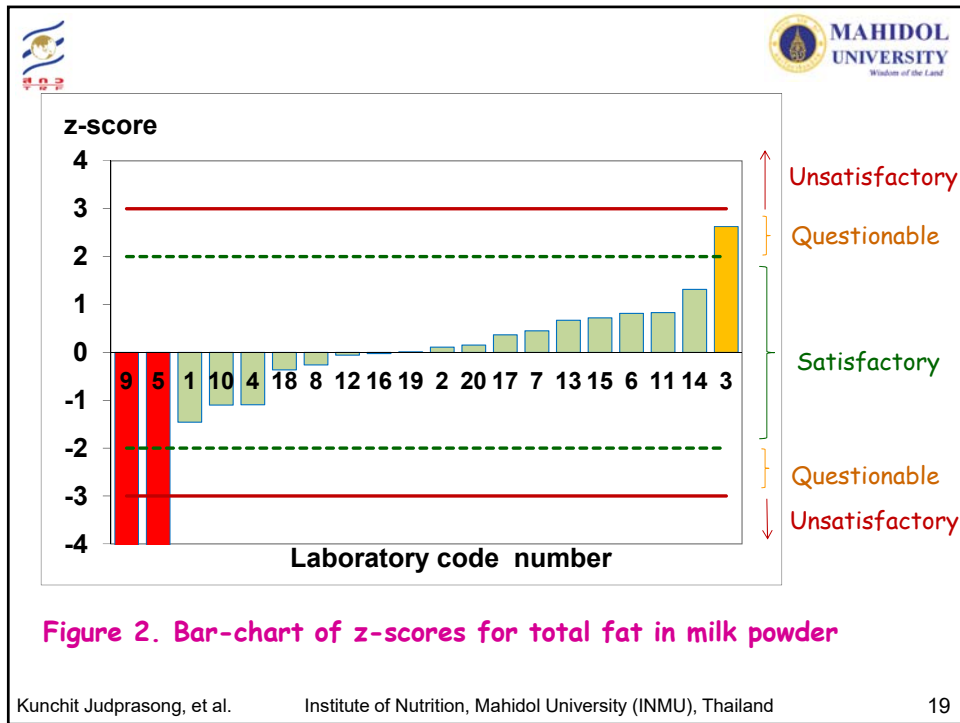

where x = average value of reported data from each participant
 \bar{X} = robust mean (x^*) obtained by ISO 13528
 SD = robust standard deviation (s^*) obtained by ISO 13528 or predicted SD of Horwitz (SD_p)

Interpretation

$|z| \leq 2$ Satisfactory (acceptable) result
 $2 < |z| < 3$ Questionable (warning) result
 $|z| \geq 3$ Unsatisfactory (unacceptable) result

Kunchit Judprasong, et al. Institute of Nutrition, Mahidol University (INMU), Thailand 18

Vitamin B1	mg	11	0.64	0.08	12.4	0.06	9.4
Vitamin B2	mg	8	0.78	0.08	10.0	0.07	8.8
Moisture	g	17	2.34	0.17	7.3	0.10	4.4
Ash	g	18	4.49	0.05	1.2	0.03	0.7

⁽¹⁾N = Number of laboratories, identified as "satisfactory performance"

Kunchit Judprasong, et al. Institute of Nutrition, Mahidol University (INMU), Thailand 22

ISO guide 35: certified value

Mean \pm U (expanded uncertainty)

$$u_{CRM} = \sqrt{u_{char}^2 + u_{bb}^2 + u_{lts}^2 + u_{sts}^2}$$

- u_{CRM}** = Standard uncertainty of the CRM
- u_{char}** = standard uncertainty due to characterization
- u_{bb}** = standard uncertainty due to between-bottle homogeneity
- u_{lts}** = standard uncertainty due to long-term stability
- u_{sta}** = standard uncertainty due to short-term stability

Kunchit Judprasong, et al.
Institute of Nutrition, Mahidol University (INMU), Thailand
23

Uncertainty of characterization: Mean \pm uncertainty

Calculation of uncertainty..... 5 approaches

1. Unc. from mean of the means $u = \frac{SD}{\sqrt{p}}$
2. Unc. from weighted mean (based on uncertainty) $u^2 = \sum w_i^2 u_i^2$
3. Unc. from weighted mean (based on SD) $u^2 = \sum w_i^2 SD_i^2$
4. Unc. from one way ANOVA $u = \sqrt{\frac{MS_{withinLab}^2}{n_{Lab} \cdot n_0} + \frac{MS_{betweenLab}^2}{n_{Lab}}}$
5. Unc. - NIST approach: used law of propagation $u = \sqrt{\left(\frac{1}{n}\right)^2 u_{\bar{x}_1}^2 + \left(\frac{1}{n}\right)^2 u_{\bar{x}_2}^2 + \dots + \left(\frac{1}{n}\right)^2 u_{\bar{x}_n}^2}$

Kunchit Judprasong, et al.
Institute of Nutrition, Mahidol University (INMU), Thailand
24

Example

Determination of property values: by ANOVA

➤ Property value by grand mean

$$\bar{x} = \frac{1}{\sum_{i=1}^p n_i} \sum_{i=1}^p \sum_{j=1}^{n_i} x_{ij}$$

➤ Standard uncertainty associated with the grand mean

$$u(\bar{x}) = \sqrt{\frac{s_L^2}{p} + \frac{s_r^2}{n \cdot p}}$$

n = number of observations
p = number of laboratories in a collaborative study
s_L = standard deviation from laboratories = $\sqrt{\frac{MS_{among} - MS_{within}}{n_0}}$ from ANOVA
s_r = repeatability standard deviation = $\sqrt{MS_{within}}$ from ANOVA

Kunchit Judprasong, et al. Institute of Nutrition, Mahidol University (INMU), Thailand 25

Uncertainty of homogeneity

$$s_{bb}^2 = s_A^2 = \frac{MS_{among} - MS_{within}}{n_0}$$

$$s_{bb} = u_{bb} = \sqrt{s_A^2}$$

Note: if $MS_{within} > MS_{between}$ then $s_{bb}^2 = 0$ Limited/insufficient repeatability

s_{bb} = between-bottle (in)homogeneity standard deviation
s_A² = between-bottle variance
u_{bb} = standard uncertainty due to between-bottle (in)homogeneity
MS_{among} = Mean square between (ANOVA)
MS_{within} = Mean square within (ANOVA)
n₀ = (effective) number of (sub)group members (ANOVA)

Kunchit Judprasong, et al. Institute of Nutrition, Mahidol University (INMU), Thailand 26

Accepted criteria for homogeneity testing

$S_r < S_{bb}$ use S_{bb} as u_{bb}

$S_r > S_{bb}$ **limited/insufficient repeatability**
calculated upper limit ↓
for the between bottle variation

Kunchit Judprasong, et al. Institute of Nutrition, Mahidol University (INMU), Thailand 27

Uncertainty of stability

Trend analysis calculated as slope/SD slope

$$\frac{|b_1|}{s(b_1)} < t_{0.95, n-2} \quad \Rightarrow \quad \begin{array}{l} \checkmark \text{ the slope is insignificant} \\ \checkmark \text{ no instability was observed} \end{array}$$

where b_1 = slope of stability data
 $s(b_1)$ = standard deviation of slope
 $t_{0.95}$ = critical t at 95% confidence limit for $n-2$ degree of freedom
 n = number of stability data

$$U_{Its} = s_b \cdot t$$

where U_{Its} = standard uncertainty due to long-term stability
 s_b = standard deviation of slope
 t = shelf life

Kunchit Judprasong, et al. Institute of Nutrition, Mahidol University (INMU), Thailand 28

Short-term stability

- u_{sts} reflects the uncertainty about changes during transport
- Tested by exposing the material to severe conditions, e.g., high temperatures etc.
- Estimation of uncertainty similar to u_{lts} via regression over the short-time stability study

↓

Double counting this effect

↓

u_{sts} can be assumed negligible

Kunchit Judprasong, et al. Institute of Nutrition, Mahidol University (INMU), Thailand 29

Table 5. Reference value of food reference material

Source of uncertainty	Description	Moisture	Vitamin B1	Vitamin B2
U_{char} [%]	Relative standard uncertainty of characterisation exercise	3.4	3.7	3.2
U_{bb} [%]	Relative standard uncertainty due to between-bottle heterogeneity	4.3	2.3	2.0
U_{lts} [%]	Relative standard uncertainty of long-term stability	2.7	4.7	3.0
U_{sts} [%]	Relative standard uncertainty of short-term stability	-	-	-
$U_{CRM, relative}$ [%]	Combined relative standard uncertainty of certified value	6.1	6.4	4.8

Parameters	Moisture (g/100g)	Vitamin B1 (mg/100g)	Vitamin B2 (mg/100g)
Certified value	2.34	0.64	0.78
Combined standard uncertainty	0.14	0.04	0.04
Expanded uncertainty (k=2)	0.28	0.08	0.08
Relative expanded uncertainty	12.2	12.7	9.7

Certify value $\pm U$ = **2.23** **0.64** **0.78**
 ± 0.28 **± 0.08** **± 0.08**

Kunchit Judprasong, et al. Institute of Nutrition, Mahidol University (INMU), Thailand 30

Choice of a coverage factor

Conventional is for 95% coverage

- $k = 2$ is acceptable for normal distribution
- when the (effective) number of degree of freedom is considered to be low, Student's t -distribution may be used
- If distribution is not symmetric, a confidence interval should be stated rather than the expanded uncertainty and a coverage factor.

Kunchit Judprasong, et al. Institute of Nutrition, Mahidol University (INMU), Thailand 31

Conclusion & Take home message

- Laboratory performance on analyses of mandatory nutrients for nutrition labeling & development of food reference materials of some mandatory nutrients were successful achieved.
- Test material with consensus values of nutrients becomes reference material with assigned values and can be used for internal and external quality control system.
- Test material used in each PT, by nature, may not suitable for analysis of all mandatory nutrients → some nutrients cannot be evaluated due to low concentration.
- Laboratories with unsatisfactory results must conduct corrective action.
- To produce CRM, isochronous stability approach should be used → reduce uncertainty due to long term stability.
- Regular participation in PT programme is required for ISO 17025 accreditation and strongly recommended for producing reliable FCD.

PRACTITIONER'S REPORT

Development of milk powder reference material and its use for evaluation of laboratory performance on analysis of mandatory nutrients for nutrition labelling in Thailand

Kunchit Judprasong¹  · Prapasri Puwastien¹ · Jutharat Supanuwat² · Sitima Jittinandana¹ · Naruemol Pinprapai¹

Received: 19 October 2016 / Accepted: 11 May 2017 / Published online: 26 May 2017
© Springer-Verlag Berlin Heidelberg 2017

Abstract This study investigated the laboratory performance on the analyses of mandatory nutrients for nutrition labelling in Thailand and aimed to upgrade the proficiency test (PT) material into a reference material (RM). This milk powder with sufficient homogeneity and multiple nutrient compositions provided an acceptable PT material. Twenty ISO 17025 accredited laboratories participated in this study, and analytical performance was investigated using ISO 17043 and ISO 13528 standards. Satisfactory performance ($t \leq 2$, for both within- and between-laboratory

developed RM can be used as quality control sample or as PT material with reference nutrient values among the laboratories in Thailand.
