

## **SINGAPORE**

### Plan of national activities

- Continue efforts in data generation/compilation, while improving data quality and harmonising data in reference to guidelines from INFOODS
- Ensure successful completion of the national food database system
- Release of revamped online food database by end 2011/early 2012

### Country needs

- Updated guidelines on sampling and analysis methodologies

### Potential contributions

- Sharing of experience on system development and dissemination of food data
- Enable our database system to be utilised by countries which do not have the capacity to leverage on IT (e.g. data from a particular country can be uploaded, so system can be used for dietary assessments)
